Subject: comprehensive plan public comment

To/
Ms. Robbins and Mr. Huston
Okanogan County Office of Planning/

I have submitted previous comments on the comprehensive plan and other planning projects, and submit this comment at this time to update my input.

The basics of my public concerns continue to include wildfire planning and response, water quantity and quality, air quality, and environmental and wildlife protections including those intertwined with Zoning planning and Shorelines Management planning.

Within the context of the recent Federal agencies and United Nations climate change report, an addition at this time to my comment list is unfortunately the expected realities of climate change effects, from lower snow pack, lower water supply, increased wildfire activity. While these issues have been part of climate change attention for many years, the current governmental address at the U.S. federal and the international level require our governmental attention at the County level at this time as well. All of the effects of climate change will effect growth and development at the County level.

In addition to my own public comments to the Comprehensive Plan, I endorse the comments submitted by the Methow Valley Citizens Council and also endorse the Alternative 4 proposed by the Methow Valley Citizens Council.

Thank you for your work on a complicated process, and thank you for the opportunity to make public comment on public service matters.

Sincerely,
Susan Crampton
